February 25, 2026

To Our Valued Customers,

Over the last year, we have benefited from relatively stable- and in some cases- lower raw material costs. Favorable weather patterns in the Gulf region and a general economic slowdown contributed to strong feedstock availability and overall price stability.

However, over the last 60 days we have received multiple price increases in our polystyrene resin driven by rising styrene monomer costs. These increases are a result of ongoing geopolitical instability in the Middle East and more recent escalation in styrene monomer feedstocks.

As a result, these cost pressures impact all our EPS and GPS product lines. In the coming days and weeks, your sales representative will be contacting you to address product pricing and next steps.

We appreciate your continued partnership and look forward to supporting your EPS and GPS needs throughout 2026.

Sincerely,

A handwritten signature in black ink, appearing to read "Todd Huempfer".
